Delivery of elements

5 working days before the date of posting your campaign

Contact : service-coordination@mb-diffusion.com

General terms and conditions:

Any non-compliance with the technical specifications will result in a non-diffusion of the campaign: clicktag non-functional, high weight, https protocol not respected, ...

Any failure to respect the deadline for the submission of the elements may lead to a delay in the diffusion of the campaign.

MB Diffusion can not be held responsible for the non diffusion or the delay of diffusion the campaign as a result of non-compliance with the technical specifications and / or the deadline for items by the advertiser.

	Rectangle Banner	Desktop 300x250	GIF or JPEG Animated GIF HTML5		

Technical specifications

1. File size

Maximum authorized weight:

/// > 50Kb

This weight limit ensures that your advertising is displayed to all visitors regardless of their type of connection.

2. HTML5

The elements to provide:

/// A zip file containing the elements of the banner (html, css, images ...).

/// Or the link to the hosted banner.

Vidéos :

CODEC	EXTENSION	VIDEO ENCODING RATES	AUDIO ENCODING RATES	RECOMMENDED DURATION	MAXIMUM RECOMMENDED WEIGHT
h264, vp9, theora	mp4, webm, ogv	600 kbits/s	96 kbits/s	15 seconds max.	2 mb

The sound must be activated by click and not by mouseover.

Videos with the sound activated by mouseover could be blocked by some browsers.

In the <video> tag, please do not forget to fill in the attribute poster = "image.jpg"

which is used to indicate the image to be displayed by default in the space reserved by the video before it plays. (NB: Depending on the browser and model of the user's mobile, the video may not display correctly. Integration of the poster ensures the display of the banner on all media.)

HTTPS Protocol:

Agriaffaires and MachineryZone sites use the HTTPS protocol to secure and make your sites more reliable.

Absolute URLs * must be called in HTTPS only. It will therefore be necessary to make sure your hosting platform is compatible with this protocol.

URLs called in HTTP will systematically result in the non-publication of the banner.

* Absolute URL: call files on remote servers such as code libraries or images.

(ex:)

Technical specifications

Clicktag :

Integration of the clicktag is mandatory in order to generate the number of clicks.

How to implement a clicktag ?

- /// Add before closing the tag </head> :

```
<script src="//ns.sascdn.com/diff/templates/js/banner//sas-clicktag-3.0.js">
</script>
```
- /// Add just after the <body > tag the following code by entering the landing page:

```
<script type="text/javascript">
  var clickTag ="http://www.mon_url.com";
</script>
```
- /// Implement a « **clickArea** » id on the div containing the animation. If there is already an id go to the next point.
- /// Add just before the tag </body> the following code:

```
<script type="text/javascript">
  function customerFunc() {
    var clickArea = document.getElementById("clickArea");
    clickArea.href = clickTag;
  }

  sas.clicktag.register(function(){
    customerFunc();
  });
</script>
```

Set the tag id containing the animation instead of « **clickArea** » if it is different.

How to implement the Google Designer clicktag ?

- /// Rename the html file of your banner to ban_iframe.html and then place the index.html file on the same folder than your html file.
- /// On the index.html file add your landing page as in the example below:

```
<script type="text/javascript">
  var clickTag ="http://www.mon_url.com";
</script>
```

Template

1. Rectangle banner

Rectangle banner - 300x250

2. Rectangle video banner

Rectangle video banner - 300x250

3. Rectangle banner (Google Web Designer)

Rectangle banner - 300x250

4. Wallpaper
